Researchers at the University of New South Wales are inviting participants to take part in a study titled “Couples’ decision-making when considering preimplantation genetic testing because of a hereditary condition”. The technique is also known as preimplantation genetic diagnosis (PGD).

You are invited If you and your partner are at risk of having a child affected by a genetic condition and are either considering using PGD or have already undergone PGD.

**To participate or read the detailed information about this study:**

Link 1: Questionnaire for women who have undergone PGT-M (PGD)
